

We have not yet made detailed instructions for using the voice over in a PC, because we cannot find anyone who knows how to do this. If you know please send us instructions. To dawn@dawnmatthews.com

In the meantime you can download a freebie that does this. This is a useful free program. We found it easy to download and it does the job including reading pdf files.

<http://www.naturalreaders.com/download.htm>

This is also useful but does not read pdf files.

<http://www.readplease.com/english/downloads/>

To record lectures talks etc on to an audio file that can be played back later and is also free go to.

www.audacity.sourceforge.net/download

If you want to convert to mps file lame can be found at:

<http://lame.sourceforge.net/download.php>
